Decree of the Rector n. 971 of 29/09/2023

Competition for awarding 1 research grant at the University of Udine

**DISCLAIMER:**
The official and legally binding call for applications is in Italian only. This document cannot be used for legal purposes and is only meant to provide information in English on the call for applications (Decree of the Rector n. 971 of 29/09/2023). Please refer to the official call published on: https://www.uniud.it/it/albo-ufficiale

Any change and integration will be made available on the above mentioned web page. Therefore, no personal written communication regarding the examination date and/or competition results shall be provided to applicants.

Annex 1

Competition announcement for the assignment of 1 research grant at the University of Udine, entitled “Mechanochemical preparation and characterization of Ru/CeO₂ catalysts derived from organometallic precursors” SSD: ING-IND/27 (principal investigator, Alessandro Trovarelli)

Research grant funded by the resources of the project PRIN 2022 - Prot. n. 2022C8CTSK

Art. 1

A selection procedure is hereby launched for the award of 1 research grant at the University of Udine, as identified in Attachment A which constitutes an integral part of the present announcement. The research grant is linked to the research project and is subject and conditioned upon the relative funding. The fellowship may be renewed, in compliance with Art. 22, Law No. 240 of 30 December 2010 (as in the text in force before the implementation of the Conversion Law of the D.L. 36/2022, L. 79/2022), Law No. 11 of 27 February 2015, and the current regulations of the University of Udine for awarding research grants, issued with the Rector’s Decree No. 182 of 31 March 2021. The renewal is subject to the scientific coordinator’s positive assessment of the researcher’s activities, an adequate scientific rationale, and a corresponding financial covering.

The research fellowship does not give rise to any right with regards to accessing University posts.

Any personal communication to candidates related to this selection will be sent exclusively to the email address indicated when registering for the selection, as mentioned in Art. 5.

Art. 2

The research grant described in this competition announcement and the required qualifications to apply for the position are identified in Attachment A. The lack of the admission requirements leads to the automatic exclusion from the competition procedure.

Possession of a PhD or equivalent degree obtained abroad or, only for the interested areas, of a medical specialization accompanied by an adequate scientific production, constitutes a preferential qualification for awarding the research fellowship of this selection, if it has not been provided as a mandatory requirement.
For the only purpose of the admission to the competition, the Examining Board (Art. 7) shall assess the equivalence of the qualification obtained abroad, except for the evaluation of the medical specialization qualification to which Article 38 of the Legislative Decree 165/2001 and subsequent modifications and additions, and EU regulations on the matter, shall be applied.

The Examining Board will proceed to the evaluation of the qualification obtained abroad according to the documentation attached to the application form. The Examining Board may exclude the candidate if the submitted documentation does not provide sufficient information for the assessment. Therefore, applicants must enclose all the documentation in their possession relating to their qualification in order to provide the Examining Board with sufficient information for assessment.

Candidates holding a qualification issued by a European Research Area country, if successful, must submit, if not already attached to the application form one of the following options:
- Supplement Diploma in English issued by the competent University.
- CIMEA Certificate of comparability of the foreign qualification, issued by CIMEA (Information Centre on Academic Mobility and Equivalence) via the "diplome" service at https://cimea.diplo-me.eu/udine/#/auth/login

Candidates holding a qualification issued by a non-European Research Area country, if successful, must submit, if not already attached to the application form one of the following options:
- Declaration of the on-site value of the qualification and the certificate relating to the degree with examinations and grades. A certificate in a language other than Italian or English must be accompanied by an official translation into one of these languages (certified by the competent diplomatic-consular authority or certified by a court in Italy).
- CIMEA Certificate of comparability of the foreign qualification, issued by CIMEA (Information Centre on Academic Mobility and Equivalence) via the "diplome" service at https://cimea.diplo-me.eu/udine/#/auth/login

If the Supplement Diploma or the statement/attestation of comparability are not available when signing the contract, the applicant must demonstrate that he/she has requested the documentation and submit it as soon as possible.

Any exclusion from the selection procedure due to lack of eligibility requirements, absence of required documents, failure to sign the selection application or submission of the selection application in a manner different from what is provided for in this call for applications will be communicated to applicants exclusively at the email address indicated in the application form.

**Art. 3**

**The research grant referred to in this call for applications cannot be awarded:**

a. to employees of Universities and the entities referred to in Article 22, section 1, of Italian Law no. 240 of 30 December 2010 (in the text prior to the reform introduced by Law no. 79 of 29 June 2022);
b. to those who have already been awarded research grants pursuant to Italian Law no. 240 of 30 December 2010 (prior to the reform introduced by Law no. 79 of 29 June 2022) for the maximum period provided by law, even if not continuously, excluding the period in which the grant was used in conjunction with the doctorate, up to the legal term of the relative course;
c. to those who have already benefited from research grants and fixed-term researcher contracts provided for, respectively, in Articles 22 and 24 of Italian Law no. 240 of 30 December 2010 (in the text prior to the reform introduced by Law no. 79 of 29 June 2022), for a total of 12 years, even if not consecutive;
d. to anyone who has a degree of kinship or affinity, up to and including the fourth degree, with:
   - the Rector, the Director General or a member of the Board of Directors of the University of Udine;
   - the scientific supervisor or a professor/researcher belonging to the department or organisation hosting the research grant in question.

The research grant provided for in this call for applications cannot be combined:

a) with scholarships of any kind, except for those granted by Italian or foreign institutions to supplement, by means of stays abroad, the fellow's training or research activities;

b) with other research grants;

c) with an employment relationship, even if part-time, without prejudice to the relevant provisions for employees of public administrations.

The grant awarded under this call for applications is also incompatible with simultaneous attendance at university degree courses, either Bachelor's degree or Master’s degree courses, research Doctorates with scholarships and medical specializations, in Italy or abroad.

Art. 4

Applicants must enclose with their application, under penalty of exclusion, the following documents:

a) their professional scientific CV, highlighting the candidate's aptitude for carrying out and implementing the research project (Attachment A);

b) their identity card, their passport or any other identification document¹;

c) (for candidates with a foreign qualification only) certification or self-certification of both the academic qualification required for the admission to the selection, and of the exams (with evaluation) took during the period of study abroad, and of any other document that can be useful to the evaluation of the degree by the Examining Board.

Applicants can attach to the application, publications and any other certification considered useful to demonstrate the qualification based on the research program (Attachment A) and to certify any research activity accomplished at public or private institutes (indicating the starting and ending date and the duration).

The documents and qualifications mentioned above must be submitted in Italian or English. Those that are not as requested will not be evaluated. Documents originally written in a language other than Italian or English must come with a translation in Italian or English, that the candidate will do on its own responsibility. The translation can be an abstract concerning the thesis.

Italian and Community candidates wishing to submit qualifications referring to conditions and facts attested by Public Administrations must proceed exclusively with self-certification. Non-EU citizens legally residing in Italy may self-certify only data that can be verified or certified by Italian public bodies. They may also use declarations in lieu when provided for by an international convention between Italy and the declarant's country of origin. Non-EU citizens not residing in Italy cannot self-certify.

Only the qualifications possessed by the candidate on the date the application form is submitted and submitted in accordance with the procedures set out in Article 5 will be assessed.

---

¹ Please be aware that the residence permit is not an identification document.
Failure to submit mandatory documents provided for in this article will constitute grounds for exclusion from the selection.

Art. 5

The submission of the applications for the present call starts on October 10, 2023 at 2:00 pm (Italian time) and ends on October 30, 2023 at 2:00 pm (Italian time).

The application to take part in the selection must be completed, under penalty of exclusion, using the appropriate online procedure, available at the link https://pica.cineca.it/

The procedure involves an applicant registration step, for those who do not already have an account, and then an application completion step.

Once completed, the online application must be signed in the manner described in the online procedure (manual signature with attached identity document or digital signature), under penalty of exclusion from selection. The application does not have to be signed if you access the above-mentioned online procedure using your SPID ID.

The qualifications referred to in Article 4 must be attached to the application in .pdf format. Individual .pdf files may not exceed 30MB.

The application for participation in the selection is automatically sent to the University of Udine with the definitive closing of the online procedure.

The University Administration:
- is not responsible if it is impossible to read the submitted documentation in electronic format due to damaged files;
- shall not accept or take into consideration qualifications or documents received in paper form or by any means other than what is specified in this article.

Reference to documents or publications already submitted in connection with other competitions is not allowed.

The Administration is not responsible for any missing document or communication because of inaccurate indication of residence and/or address submitted by the candidate during the application. Also, the Administration is not responsible if the candidate has not communicated changes in this information, or has communicated them too late. The Administration is also not responsible for any postal or telegraphic problems not attributable to the Administration itself.

Applicants are advised not to wait until the last few days before the closing date to submit their application. The University accepts no responsibility for any malfunctions due to technical problems and/or overloading of the communication line and/or application systems.

Art. 6

The selection procedure is held in accordance with the modality indicated in Attachment A.

The test will aim to assess the general preparation, experience and aptitude for research of the candidate. It will consist in the evaluation of the professional scientific curriculum, of the publications and qualifications presented, and of the interview, where foreseen.
**Art. 7**
The Examining board for the competition is identified in Attachment A of the present competition announcement, of which it is an integral part.

At its first meeting, the Examining board shall appoint its President and Secretary, and establish the criteria and methods for evaluating the qualifications and the interview, where foreseen.

The results of the qualifications assessment must be disclosed to applicants during the interview, where foreseen.

The Examining board can award a maximum of 100 points (one hundred out of one hundred) to the selection.

At the end of the evaluation procedure, the Examining board shall formulate the general merit list based on the overall score of each candidate, and draw up the minutes of the whole competition procedure.

Based on the ranking list, the assignment is awarded to candidates who have obtained a minimum overall score of 70/100 (seventy out of one hundred).

The Examining board's judgement is final.

The ranking list will be made public exclusively through publication on the University's official website.

Applicants will not be notified of the outcome of the evaluation.

Those who do not declare their acceptance of the research grant and do not present themselves at the research centre within the deadline communicated by the latter, even if not formally, shall lose the right to receive it. Exceptions to this term will only be granted in cases of documented force majeure.

**Art. 8**
The research activity cannot be started before signing the contract defining the terms and conditions of the collaboration.

The activity covered by the research grant must have the following characteristics:

a) it must be carried out as part of the research programme covered by the grant and not be a merely technical support to it;

b) it must have a close connection with the realization of the research program for which the winner of the grant has been awarded the contract;

c) it must be continuous and, in any case, temporally defined, not merely occasional, and in coordination with the overall activity of the University;

d) it must be carried out autonomously, solely within the limits of the programme prepared by the programme supervisor, without predetermined working hours.

The researcher is required to submit a detailed written report on the work carried out and the results achieved, accompanied by the opinion of the scientific supervisor, to the reference organisation at the intervals set out in the contract. The researcher must also submit interim reports and timesheets, if requested by the reference organisation.

Either the fellow or the reference organisation may withdraw from the contract.
The reference organisation may terminate the contract not only in the cases referred to in Article 9, sections 2 and 3, of the "Internal rules for awarding research grants pursuant to law 240 of 30 December 2010" of the University of Udine, but also in the event the research project and therefore the financial coverage on which the research grant is based cease to exist.

**Art. 9**

The following legal dispositions shall apply to the grant referred to in this call for applications:
- for tax matters, the provisions of Article 4 of Italian Law no. 476 of 13 August 1984, as subsequently amended and supplemented;
- for social security matters, the provisions of Article 2(26) et seq. of Italian Law no. 335 of 8 August 1995, as subsequently amended and supplemented;
- for mandatory maternity leave, the provisions of the Italian Ministerial Decree of 12 July 2007;
- with regard to sick leave, the provisions of Article 1(788) of Italian Law no. 296 of 27 December 2006 and subsequent amendments.

During the period of mandatory maternity leave, the allowance paid by INPS according to Art. 5 of the Italian Ministerial Decree of 12 July 2007 is supplemented by the University up to the full amount of the research grant.

The grant will be paid in monthly instalments.

**Art. 10**

The data collected as part of the procedure referred to in Art. 5 are necessary to properly manage the selection procedure, for any subsequent management of the research grant and for purposes related to managing services provided by the University. The University of Udine is the Data Controller. At any time, the data subject may request access, rectification and, depending on the University's institutional purposes, cancellation and restriction of processing or oppose the processing of their data. The data subject can always lodge a complaint with the Italian Data Protection Authority. The complete disclosure is available on the University of Udine website in the "Privacy" section, accessible from the home page [www.uniud.it](http://www.uniud.it) Direct Link: [https://www.uniud.it/it/pagine-speciali/guida/privacy](https://www.uniud.it/it/pagine-speciali/guida/privacy)

**Art. 11**

For all matters not expressly mentioned in this call for applications, refer to the regulations in force on the subject cited in the introduction and to the "Internal rules for awarding research grants pursuant to Italian Law no. 240 of 30 December 2010" of the University of Udine, issued by Rector's Decree no. 182 of 31 March 2021.

**Art. 12**

The procedure supervisor is Dr Sandra Salvador, Head of the Research Services Area of the University of Udine.

The Responsible office at the University of Udine is “Area Servizi per la Ricerca - Ufficio Formazione per la Ricerca”, via Mantica n. 31 - 33100 Udine, Italia.

To request information about the call for applications, please complete the following form available on the University of Udine website: [https://helpdesk.uniud.it/SubmitSR.jsp?type=req&accountId=universityofudine&populateSR_id=42105](https://helpdesk.uniud.it/SubmitSR.jsp?type=req&accountId=universityofudine&populateSR_id=42105)

Titolo dell’assegno di ricerca / Topic of the research fellowship “assegno di ricerca”:
I bandi sono consultabili dal sito dell’Ateneo, del MUR e di Euraxess / The calls are available on the University, MUR and Euraxess websites

Testo in italiano:
Preparazione meccanochimica e caratterizzazione di catalizzatori a base di Ru/CeO$_2$ derivati da precursori organometallici.

Testo in English:
Mechanochemical preparation and characterization of Ru/CeO$_2$ catalysts derived from organometallic precursors.

Obiettivi previsti e risultati attesi del programma di ricerca in cui si colloca l’attività dell’assegno di ricerca / Foreseen objectives and results of the research programme performed by the research fellow “assegno di ricerca”:
I bandi sono consultabili dal sito dell’Ateneo, del MUR e di Euraxess / The calls are available on the University, MUR and Euraxess websites

Testo in italiano:
La macinazione e l’utilizzo dell’energia meccanica per la promozione di reazioni chimiche trova le sue origini nella preistoria; tuttavia, lo studio sistematico della “meccanochimica” è piuttosto recente. L’utilizzo della meccanochimica per la preparazione di materiali catalitici presenta dei vantaggi ambientali in quanto, non richiedendo l’utilizzo di solventi, potrebbe sostituire i più convenzionali metodi di preparazione “umidi”. Inoltre, l’energia meccanica fornita dalla sintesi meccanochimica è in grado di stabilizzare delle fasi metastabili di altrimenti difficile ottenimento (1-3). Partendo da diversi precursori di metallo (tipicamente polveri metalliche o sali/ossidi commerciali) e materiali di supporto, è possibile ottenere una moltitudine di catalizzatori metallo-supportati aventi una dispersione della fase metallica nell’ordine dei nanometri (4). Questi materiali sono stati utilizzati in diverse reazioni catalitiche come l’ossidazione di CO e CH$_4$ (4-6), la riduzione di NO (7), produzione di H$_2$ (8) e sintesi di ammoniaca (9). In questo contesto, c’è crescente interesse nello sviluppo di catalizzatori efficienti per la produzione pulita di idrogeno a partire da carrier liquidi di H$_2$, che rappresenterebbero una valida soluzione per l’immagazzinamento di energia rinnovabile. Tra questi, l’ammoniaca è considerata un vettore energetico chiave per la transizione verso un’economia a basse emissioni di carbonio, poiché è un vettore affidabile e di facile applicazione per lo stoccaggio e il trasporto di H$_2$ verde; questo grazie alle esistenti tecnologie altamente efficienti per la sua produzione e infrastrutture di distribuzione. Nonostante la mancanza un consenso generale sul meccanismo di reazione, è noto che i catalizzatori a base di Ru forniscono le migliori prestazioni catalitiche per questa reazione (10,11). Diversi studi hanno mostrato come l’attività di questi materiali possa essere influenzata dall’aggiunta di dopanti (soprattutto promotori elettrodonatori come Li, K e Na) e/o dalla scelta del supporto (11-13). Tra i diversi supporti, l’ossido di cerio (CeO$_2$) è stato recentemente investigato grazie alle sue note proprietà chimiche ed elettroniche, che sono considerate benefiche nell’aumentare l’attività catalitica verso la...
decomposizione di NH₃ andando a prevenire la sintierizzazione del metallo e a promuovere l’interazione metallo-supporto (14-16). Tuttavia, rimangono diversi aspetti da investigare al fine dell’ottimizzazione dell’attività catalitica e dell’economia complessiva della reazione.

In questo progetto si vuole investigare l’effetto di diversi precursori di Ru depositati via meccanochimica su supporti di CeO₂. La preparazione dei catalizzatori mediante macinazione verrà effettuata seguendo il protocollo stabilito nel nostro gruppo (tempo e frequenza di macinazione, numero di sfere e atmosfera all’interno della giara) per i sistemi metallo-ceria ottenuti a partire da precursori commerciali (6, 17). Ciò consentirà di effettuare, partendo da una serie definita di composti/complessi di coordinazione organometallici forniti dalla collaborazione con il gruppo dell’Università degli Studi di Trieste, uno studio in cui l’unica variabile siano i diversi precursori. Il trattamento termico post-sintesi sarà definito sulla base degli esperimenti termogravimetrici utili nel determinare la temperatura di rimozione dei diversi leganti dei diversi precursori. I catalizzatori saranno quindi caratterizzati tramite diffrazione di raggi-X, spettroscopie FT-IR e Raman, microscopia a scansione elettronica ed esperimenti di riduzione e desorbimento in temperatura programmata di molecole sonda come NH₃, N₂ e CO₂ (15, 18). Gli esperimenti di desorbimento in temperatura programmata saranno utili per la selezione dei catalizzatori più promettenti per i test di decomposizione dell’ammoniaca. Per quanto riguarda la scelta del supporto, questa sarà perseguita considerando che il nostro gruppo, basandosi sulla sua lunga esperienza su materiali a base di ceria, ha recentemente sviluppato una procedura per la preparazione di ceria ad altissima area superficiale e ceria drogata con aree superficiali comprese tra i 250 e i 320 m²/g. Con questo approccio, verrà confrontato l’utilizzo di ceria ad alta area superficiale con quello di ceria commerciale. I catalizzatori finali saranno testati nella decomposizione dell’ammoniaca per produzione di H₂ dal gruppo del Politecnico di Milano.

Text in English:

Milling is an ancient art and the use of mechanical forces to promote chemical reactions dates back to prehistory; however, a systematic approach to “meccanochemistry” is quite recent. The application of meccanochemistry to the preparation of catalytic materials is motivated by the environmental benefits obtained in replacing conventional wet-based approaches with solvent-free mechanical processes and by the potential to stabilize metastable phases which would be otherwise challenging to obtain (1-3). A wide range of different supported catalysts can be produced by simple milling, starting from different transition or noble metal precursors (typically metal powders or simple commercial salts/oxides) and a support material, resulting in nanometer-sized metal nanoparticles on different supports (4). These have been used in different reactions like CO and CH₄ oxidation (4-6), NO reduction (7), H₂ production
(8) and synthesis of ammonia (9). In this respect, a growing field of interest is the development of efficient catalysts for clean H$_2$ production from liquid hydrogen carriers, which represent a solution for the chemical storage of renewable energy. Among them, ammonia is regarded as key energy vector for the transition to a low-carbon economy, as it is a reliable and easy applicable carrier for the storage and transportation of green H$_2$ due to the existing and highly efficient technologies for its production and infrastructures of distribution. It is well established that Ru-based materials provide the best catalytic performances for this reaction, although the mechanism is still debated (10, 11). Different studies report that the activity of Ru-based catalysts can be tailored by the addition of dopants (mainly electrodonating promoters, such Li, K and Na) and by the choice of the support (11-13). Among the supports considered, CeO$_2$ has been recently investigated thanks to its well-known chemical and electronic properties, which are regarded as beneficial in enhancing the activity for NH$_3$ decomposition by preventing metal sintering and promoting metal-support interactions (14-16). However, several aspects still need to be addressed to improve the catalytic performances of Ru and the overall atom economy of the reaction.

In this project we want to investigate the effect of different Ru precursors deposited by mechanical milling on ceria support. The preparation of catalysts by mechanical milling will be carried out following the protocol (milling time and frequency, number of spheres, milling atmosphere) established by our group for metal-ceria systems using commercial precursors (5,17). This will afford a systematic screening of the well-defined portfolio of organometallic/coordination Ru-based compounds provided by cooperation with the group in Univ. Trieste, where the only variables will be the different precursors. The treatment after milling will be designed in order to remove the residuals with the help of thermogravimetric analysis. The catalysts will then be characterized by means of X-ray diffraction, Raman and FT-IR spectroscopy, scanning electron microscopy and temperature programmed reduction and desorption of descriptive molecules, such as NH$_3$, N$_2$ and CO$_2$ (15,18). Temperature programmed desorption will provide useful information for the selection of the most promising catalysts to be tested for ammonia decomposition.

Regarding the choice of the support, this will be pursued by considering that our group, based on its long experience on ceria-based materials, has recently developed the preparation of very high surface area ceria and doped ceria with surface areas in the range 250-320 m$^2$/g. The approach will consider the use of pure high surface area ceria compared with a commercially available CeO$_2$ sample. The final catalysts will be tested by the group at Politecnico Milano in the ammonia decomposition reaction for H$_2$ generation.
